DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Arndt et al.* (5,949,550) in view of *Leifeld* (5,648,553).

As to **claims 1-4**, Arndt discloses a system for detecting defects in a moving web, comprising:

using an optical sensor (22) to apply light to a predetermined position of a moving route of sheet material and to pick up light reflected from the surface of the sheet material that has been shifted by a predetermined distance (col. 3, lines 57-68); and

judging a difference in reflectivity (brightness), using a computer (28) from the reflected image and foreign matter (col. 4, lines 23-29 and 54-68).

Arndt differs from the claimed invention in that details of the optical sensor are not provided. However an optical sensor including a light source and camera are well known as taught by Leifeld. Leifeld discloses an imaging apparatus for scanning a clothed roll in a fiber

processing machine that includes a light source and camera to illuminate the roll, the light illuminating the roll at a predetermined angle (see fig. 6, items 18-19). It would have been obvious to one having ordinary skill in the art at the time of invention to illuminate the roll at a predetermined angle to ensure that the light reflected from the surface directly enters the camera.

Allowable Subject Matter

Claims 5-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: image processing for detecting whether or not the brightness of the reflected image becomes a predetermined value or less.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Lucas (4,213,708) and Watanabe et al. (5,109,236).
